- ☐ the language of the translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3).

3. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

III. Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

1. The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non obvious), or to be industrially applicable have not been examined in respect of:

☐ the entire international application.

☒ claims Nos. 9-11

because:

☐ the said international application, or the said claims Nos. _____
relate to the following subject matter which does not require an international preliminary examination (*specify*):

☐ the description, claims or drawings (*indicate particular elements below*) or said claims Nos. _____
are so unclear that no meaningful opinion could be formed (*specify*):

☐ the claims, or said claims Nos. _____ are so inadequately supported
by the description that no meaningful opinion could be formed.

☒ no international search report has been established for said claims Nos. 9-11

2. A meaningful international preliminary examination cannot be carried out due to the failure of the nucleotide and/or amino acid sequence listing to comply with the standard provided for in Annex C of the Administrative Instructions:

☐ the written form has not been furnished or does not comply with the standard.

☐ the computer readable form has not been furnished or does not comply with the standard.

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	1-8, 12-25	YES
	Claims		NO
Inventive step (IS)	Claims	1-8, 12-25	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-8, 12-25	YES
	Claims		NO

2. Citations and explanations

1. The present application relates to a method for the targeted expression of nucleic acid sequences in non-reproductive flower tissues, i.e. not in pollen or ovaries, and methods for identifying promoters suitable for such purposes.
2. The promoters indicated in claim 1 are known from the prior art as sequences which are 5' from Arabidopsis genes. However, it was not known or obvious that these genes are expressed in non-reproductive flower tissues. The method as per claim 1 and the expression cassette according to claim 14 can therefore be considered novel and inventive.
3. The method according to claim 3 appears to be based on the assumption that the genes identified by the sequences are likewise expressed in non-reproductive flower tissues. However, it is not clear whether this is the case and whether the claimed invention can be carried out with each of these sequences. Furthermore, claim 3 is unclear since it refers to "variations" which are not specified any more closely.
